IPFS Commands -

```
Ipfs
ipfs add <path>... - a file or directory to IPFS
ipfs cat <ipfs-path>... - Show IPFS object data
ipfs bootstrap rm all - Remove all peers from the bootstrap list.
ipfs cid - Convert and discover properties of CIDs
ipfs commands - List all available commands.
ipfs config <key> [<value>] - Get and set IPFS config values.
ipfs daemon - Run a network-connected IPFS node.
ipfs file - Interact with IPFS objects representing Unix filesystems.
ipfs file ls <ipfs-path>... - List directory contents for Unix filesystem
                               objects. Deprecated: Use 'ipfs ls' instead.
```
